ABSTRACT

This study aims to increase the understanding of Jatinom Village community members about the construction planning in Jatinom tourism village area for the empowerment of local communities; developing the knowledge of the residents to nurture the opportunity of facilities development for the Jatinom tourism village area for the empowerment of local communities; and assistance to the members of the Jatinom Village community regarding the construction of facilities for the Jatinom tourism village area for the empowerment of local communities. Training method is carried out by combining methods of activities inside and outside the building and data collection techniques. The results of the study conclude: 1) Conducting workshops related to the construction of public facilities, especially the Meeting Hall, which was held on the 9-11 week as a form of effort to increase the understanding of the community. The workshop demonstrated the steps to choose materials and tools that were effective and efficient in the process of building public facilities, steps to calculate the budget plan for public facilities and steps to plan a strong and good construction including foundations, walls, and roofs. The workshop went well and the people of Jatinom Village were happy since they received additional knowledge related to the construction of public facilities, especially the Meeting Hall; 2) Efforts to expand the knowledge, namely the continuation of workshop activities in the form of training in calculating the budget plan for public facilities, training on strong and good construction planning covering foundations, walls and roofs. The trainings ran smoothly as planned and the community also feels happy with the trainings; and 3) Assistance program in the form of assistance in the initial construction, namely the construction of the pavilion foundation, which is in accordance with the trainings that have been attended by local residents. The program ran well and smoothly.
