

DEVELOPMENT OF SPORT VENUE TRACKER TO INCREASE ACCESSIBILITY, PROMOTION AND REVENUE OF SPORTS FACILITIES IN THE SPECIAL REGION OF YOGYAKARTA POST COVID-19 PANDEMIC

by Prof. Wawan S. Suherman, M.Ed. dkk

ABSTRACT

Post-pandemic conditions have made many people aware of the importance of maintaining health, one of which is by regularly carrying out sports exercises. There are many sports facilities in the Special Region of Yogyakarta but not all locations are known to everyone. The sports venue tracker prototype is an application that makes it easier for people to find the nearest sports facilities. The application presented is website-based which can also be accessed via smartphone. This application was developed using the Lavarel 8 programming language, Botsrapp CSS, MySql, and utilizes the Google Map API feature. The prototype has been validated by experts and shows that the application gets good or very good results. The output of this development research is registered with IPR and draft publication articles.

Kata Kunci: *sport tracker venue, sport, yogyakarta*
