ABSTRACT

The Study from Home (SFH) system as one of the strategies to reduce the transmission of the Covid-19 virus during the pandemic makes learning activities at various levels of education carried out online. Various obstacles arise both from the school, teachers, students, and parents, so that appropriate learning strategies are needed to maintain the quality of the teaching and learning process with existing limitations. At the vocational school level, the lack of technology mastery has resulted in many accounting teachers finding it difficult to teach accounting practicum subjects for service, trade, and manufacturing companies online. Based on this, the Community Service Team from the Accounting Education Department FE UNY held a Training on Accounting Learning Strategies for Service, Trade, and Manufacturing Companies in the Pandemic Era for MGMP Accounting Teachers at Vocational School in Sleman Regency.

The method used is training with 3 stages, namely preparation, implementation and evaluation. The process of delivering material is carried out using the lecture, practice and assignment methods. The material was given by competent resource persons. The material provided consists of learning concepts of accounting for service companies, trading companies, and manufacturing companies.

The training activities went well. This can be seen from the achievement of the target participants who exceeded the initial target, attendance, enthusiasm and positive responses from the participants, the collection of tasks and the results of the participant satisfaction questionnaire.
