ABSTRACT

Currently information and communication technology (ICT) has become a primary need and even the backbone for the provision of education in higher education (PT). In general, PT can be categorized as a large institution, if measured by the number of students, employees (lecturers and non-lecturers), number of activities in a unit of time, number of buildings and space, etc. For large institutions, development, management of ICT facilities and others Using it needs to be well designed to ensure that ICT facilities can be used utilized optimally and bring the expected profits. Preparation of blue print and grand design for IT governance for Education Universities Muhammadiyah needs to do something to realize the implementation of ICT in this institution well. Every organization – commercial or non-profit – needs a plan related to system development strategies and information technology. As is good planning, it is hoped that the resulting information technology can provide a number of values to the organization concerned, such as: optimizing cost allocation development and implementation, aligning information technology functions with needs organization (alignment), reduced risk of implementation failure, avoided development patchy and redundant systems, have a common language in development system, and the definition of quality system development architecture standards.
