

Comparative Study on Master Program in Physical Education between Indonesia, Malaysia, and Spain

by Soni Nopembri, Jaka Sunardi, Saryono, Komarudin, Yudanto

ABSTRACT

This study aims to compare master programs in physical education between Indonesia, Malaysia, and Indonesia based on vision and mission, graduate profile, curriculum, human resources, infrastructure, and financing aspects. Comparative research with a qualitative approach used in this study to compare the six aspects of the study program. This study involved fifteen master's programs in physical education consisting of five master's programs in Indonesia, five master's programs in Malaysia, and five master's programs in Spain. The research instrument is a documentation sheet used by researchers to collect qualitative data. Qualitative data analysis with an interactive model used in this study. The results of the study show that the vision, mission, graduate profile, human resources, infrastructure, curriculum, and financing of the Master of Physical Education Study Program in the three countries have similarities and there are some differences. This provides an opportunity for all study programs to collaborate to maximize commonalities and to reduce differences.
