

MACHINERY MAINTENANCE TECHNIQUE FOR NATURAL FIBER CRAFTS IN BANTUL

by Yatin Ngadiyono, Arif Marwanto, Widarto

ABSTRACT

The purpose of this activity is to provide understanding, insights and attitudes that must be possessed by workers and entrepreneurs, in order to understand the maintenance principle in order to increase their productivity. Furthermore, it can implement a maintenance management system, so that it can help the production process. The method used is by lecturing, discussion and practice, to provide understanding, insight and attitude and increase productivity. Simulation training for workplaces so that they can maintain and repair production equipment to be able to improve engine performance. Monitoring to see the production process by paying attention to the maintenance process before and after using the machine. The event was attended by 30 participants. The results of the activity revealed that participants could understand the importance of training in maintenance and repair techniques. Participants show a high enthusiasm that is expected to be applied in the process of working everyday. Provision of maintenance equipment is able to provide the means to disassemble and install components on the damaged machine, so that the engine can operate again with adequate equipment.
