ABSTRACT

This study aims to: (1) determine the influence of the quality leadership of the principal of SMKN 2 Depok Sleman in improving the quality of education through 8 National Education Standards (SNP); (2) determine the influence of the distributive leadership of the principal of SMKN 2 Pengasih Kulon Progo in improving the quality of education through 8 National Education Standards (SNP). This study is a quantitative study. The study population was all teachers (including the principal) who taught at SMKN 2 Depok Sleman and SMKN 2 Pengasih Kulon Progo in D.I Yogyakarta Province. The research sample was selected 30 teachers (including the principal) totaling 30 each school, so that the total sample amounted to 60 people. Collecting data using a questionnaire where to add information using observation and documentation study. Data analysis used quantitative statistical techniques with the data being tested for normality, linearity and multicollinearity first, then continued with a single regression analysis. The results of the study are as follows. (1) Leadership quality (X1) Principal of SMKN 2 Depok has no effect on SNP (Y) with the value of Sig. 0.543 (conditions affect the sig value. $<0, 05$); (2) Distributive leadership (X2) Principal of SMKN 2 Pengasih has an effect on SNP (Y) with the value of Sig. 0.004 (conditions affect the value of sig. $<0, 05$).
