## **ABSTRACT**

### **Abstract**

Yard area for low-income families can be managed as a granary of life, living pharmacy, cafes as well as a life or life enhancer. This means that the family can provide their own food through the processing of diverse grounds, whether around the home or other land. Yard area has long been known and has multiple functions. The yard function is to generate: (1) foods in addition to rice fields and moors; (2) vegetables and fruits; (3) poultry, cattle fish; (4) herbs, spices and perfumes; (5) handicraft materials; (6) firewood; and (7) of cash. Some things that affect the level of food consumption, among others, the willingness of factors, purchasing power and social culture. One attempt was made to increase availability of food for consumption in micro scale is through utilization of the yard with the hope of improving the welfare of the family.

Policies pursued by the government in the implementation of the development is the utilization of the yard in order to fulfill the needs of food consumption / food supply source of protein, vitamins and minerals with a variety of diverse and balanced consumption for the community / family, and if the result is excess can be sold as an additional revenue keluarga. Pengembangan utilization of the yard is the development of consumption patterns at the micro level, to complement the needs of consumption as well additional family income. Enterprises in the yard if it is managed in accordance with the potential incentives yard, then in addition to complement the consumption needs of food and nutrition, can also contribute to the family income.
