ABSTRACT

Research is the major of all scientific works. High-quality scientific work has elements of novelty, accuracy, citation factors, and the results can be utilized by the community. This international collaboration research aims to produce scientific works contained in reputable international journals and improve the MoU of collaboration that has been held by the German Language Education Department of Faculty of Languages and Arts Yogyakarta State University and the Münster University Westfallen Wilhelm Universität Germany. The research was designed in conjunction with the Visiting Professor or Guest Lecturing program. This is based on international collaboration between the German Language Education Department and the German University of Münster that has been established quite closely. When teaching students, Münster University can already be used for technical assessment of data collection. Visiting professors or Guest Lecturing last for one month so there is plenty of time to do research well. The outputs of this international collaboration research are (1) scientific articles published in reputable and indexed international journals Scopus or WoS, (2) renewing the MoU that has been held by the German Language Education Department of FBS UNY, and (3) innovative German learning models from learners natively by foreign lecturers and vice versa foreign students by native lecturers.

Kata Kunci: *German language teaching, native speaker, guest lecturing*
