Abstract

This study aims to develop a prototype parenting material guide to increase parent and teacher knowledge about childcare. This study uses R&D (research and development) based on the Borg & Gall product development model. The data collection techniques use scale. In this study the instrument used for quantitative data collection is in the form of a scale for expert testing (expert). The target of this research is the preparation of a prototype parenting material guide for parents and teachers in kindergarten.

The development of the parents gathering guide was deemed feasible with revisions so that it could be continued for field trials. This can be seen from the testing of instruments from material experts. As for the assessment data from the validator namely: in terms of writing which includes grammar, vocabulary, and sentence structure get a score of 3 (good), in terms of readability which includes the use of sentences get a score of 4 (very good), completeness of the material and wrinkles get a score of 2 (enough). Furthermore, the contents of the guide which includes introducing, linking relevant theories, containing solutions or alternative solutions to get a score of 2 (enough). In addition, the results of the guide readability test by 42 teachers showed data, namely 1 teacher gave a very good rating, 31 teachers gave a good assessment, and 10 teachers gave a pretty good rating of the parent gathering material guide.
