ABSTRACT

The training on Cultivation and Post-Harvest Processing of Lemongrass Plants as an Effort to Improve the Entrepreneurial Capability of Women in the Hamlet of Samen, Sumbermulyo, Bambanglipuro which has been carried out has the aim of building public awareness in managing the potential that exists in the location to be used as capital in entrepreneurship. This community service activity is based on the importance of awareness about entrepreneurship by using local potential as an effort to meet the economic needs of the community during a pandemic. The target group for this activity is the 25 female residents of Samen hamlet who are considered motivated and productive aged between 20-45. Participants in this activity looked very enthusiastic, it could be seen from the number of participants who wanted to ask questions and express their opinions in the question and answer session.

The material presented in the training on cultivation and post-harvest processing of lemongrass plants is awareness of entrepreneurship using local potential and how to process lemongrass plants so that they can have economic value. In addition, the distribution and planting of lemon grass was held. The method used is lecture, demo, and question and answer. The result of the training is the growth of public awareness for entrepreneurship by utilizing properly managed lemongrass plants.
