ABSTRACT

In order to improve the quality of education, various teacher quality improvement programs have been implemented through training related to PBM, Teacher Competency Test, training in the field of learning evaluation and research. There are 2 main goals that can be achieved with PTK including making improvements, improvements and changes in a better direction and finding models or procedures of action that provide guarantees against problem solving efforts. The benefits of implementing PPM are to develop a culture of research in schools and increase the participation of PTK activities carried out in the classroom without having to leave PBM activities in the classroom. Junior high school teachers are generally target audiences who become the focus of this community service activity. As a target audience between strategic, These are teachers who already urgently need scientific work as a requirement for the promotion of functional positions. Ppm activities are expected to improve the ability and skills of teachers in conducting classroom action research that can be used as a means of improving the learning process and the activeness of learners. Therefore, the implementation of PPM will be carried out within 3 days with the following description: (1) Seminar followed by Mr. Teacher in SMP N 1, (2) On the first day of submission of introductory material on the types of educational research, (3) On the second day of mentoring in making PTK proposals, (4) On the third day of mentoring in making PTK reports
