ABSTRACT

ABSTRACT

This Community Service Program (PPM) aims to provide basic knowledge of making instant drinks, dissemination of typical Indonesian drinks that are useful for increasing immunity during a pandemic and business prospects for Indonesian rhizome-based instant drinks for residents of Trihanggo, Gamping Sleman.

This activity was carried out through a blended platform, starting with gathering residents to provide brief counseling, distributing basic materials and making videos, followed by online assistance for working groups. Independent practice was also carried out by PPM participants although the mentoring was carried out in groups. The enthusiasm of the PPM participants in applying the information received is evidenced by the independent manufacture of herbal rhizome products.

This PPM is a synergy between the community-campus in helping the community to fortify themselves and their families from being infected with the corona virus by increasing immunity through the provision of instant drinks at homes.
