**ABSTRACT**

The PPM report is a statement regarding the results of research that has been carried out at SMA Islam Al-Azhar 9 Yogyakarta. The purpose of this activity is to increase the strengthening of character values ??in preparation for the Minimum Accuracy Assessment (AKM), and Distance Learning (PJJ). In addition, it also aims to improve the ability of teachers to write scientific papers. Online learning is still being carried out in schools in Yogyakarta. This is a lot of obstacles that must be faced by students and educators. During a pandemic like what is happening at this time, teachers must be able to instill good character education for students. Character education is one solution to overcome the decline in moral values, especially among teenagers (students). The research that has been carried out aims to describe the components of character formation in the pedagogical, personality, social and professional competencies of teachers. Teachers are also expected to be able to raise the spirit of students in an online situation like today. Teachers are required to master several methods, models or active learning strategies so that the learning steps are prepared and practiced properly and correctly. From the results obtained, firstly, teachers of SMA Islam Al Azhar 9 Yogyakarta have competence in teaching at this level, secondly, teachers understand the essence of character education in learning.
