

COMMUNITY GUIDELINES: DEVELOPMENT OF TOURIST VILLAGE IN MEJING MULYODADI BAMBANGLIPURO BANTUL

by Danar Widiyanta, Miftahuddin, Ririn Darini, Mudji Hartono, Dyah Ayu Anggraheni Ikaningtyas

ABSTRACT

One of the drivers of the economy is tourism. The government and the community in several villages in Yogyakarta are actively turning on local tourism. The public was given a briefing about tourism awareness and then explored and developed the tourism potential that exists in each region. Mejing, one of the hamlets in Bantul, Yogyakarta, has a lot of tourism potential. This year the PPM team explored one of the tourism potentials in the form of kanceng wasp cultivation. The development of kanceng wasp culture is intended to improve the welfare of the surrounding community. Management of kanceng wasps is not difficult, the community provides land and plants around the house and does not require special treatment.

The development of kanceng wasp cultivation was carried out in every house in the Mejing. The main goal is to increase community income through the sale of klanceng wasp honey. The first step taken for the cultivation of the klanceng wasp is by giving seedlings of the bumble bee colony to each head of the family as an incentive for further development. The first step taken to cultivate a wasp is to provide seedlings of the wasps to the head of each family as a stimulus for further development. In addition to the klanceng wasp colony, the servants also provided stimulant funds to the community to support activities.

Kata Kunci: *Klanceng wasp, honey, and Mejing*
