ABSTRACT

The purpose of this activity is to provide knowledge and skills to groups of wood mask craftsmen in the hamlets of Batur, Putat, Patuk, Gunung Kidul, related to machine maintenance and the application of K3 principles. It is hoped that all participants will be able to independently carry out maintenance of their own production equipment and have the awareness to always apply K3 principles in every activity of the production process.

The activity method used is by using lectures, discussions, simulations, and hands-on practice, so that the material presented is easier for participants to understand. After completing the activity, an evaluation of both the capabilities and understanding of partners is carried out as well as an evaluation of the activities that have been carried out.

The results of this activity are: (1) the number of participants is 25 craftsmen; (2) the initial ability of the participants before attending the training, are still unfamiliar or do not understand machine maintenance techniques with the correct procedures; (3) the ability of participants after participating in the training activity is that all participants (100%) have understood the material presented and are able to apply it to the production process they are running.
