ABSTRACT

The weakness of teachers in developing learning during the pandemic coincides with the condition of the learning system that is less than optimal. Learning is still carried out in one direction, the teacher gives assignments, students do the assignments. Some student problems are not exposed in-depth, resulting in less than optimal learning outcomes. This condition encourages the need to develop teaching materials that can become friends and teachers for students to study at home. Efforts to produce productive and inspiring learning resources for students have not been fully fulfilled. Not all teachers are able to develop flexible learning resources during the pandemic. In the current pandemic conditions, direct teacher training is a necessity. That's why this training was carried out online to develop learning resources during the pandemic. The method of activity used is a combination of tutorials or lectures, discussions or questions and answers, and independent practice and groups accompanied by resource persons from the service team through non-face-to-face online. Based on the results of the assessment of interesting-interactive teaching materials as learning media made by all PPM participants, the results were 61% in the very good category with a score above 85, 25% in the good category with a value between 70 to 85 while 14% in the moderate category with a score below 70 So it can be concluded that the PPM participants have understood the material presented by the Service Team. Based on the results of the PPM participant satisfaction questionnaire distributed by the Service Team as a form of PPM evaluation, it was found that 82% were in the high category, 18% were in the moderately high category and 0% were in a low category. So it can be concluded that PPM participants have high satisfaction with the workshop activities of the service team from Social Science Education in 2021.
