## **ABSTRACT**

*The Corona Virus Disease (Covid-19) pandemic has massively changed the pattern of life. Including in the world of education. The learning process, which is usually carried out face-to-face, has now turned into a distance learning system or in a network (online). A number of regions have closed schools and implemented online learning. The policy for studying at home starting Monday, March 16 until the end of March 2020 has been implemented by the government. Efforts to improve effective online learning management are carried out through online training for two days, followed by assignments and mentoring. The target audience of this activity is 75 teachers at Muhammadiyah 1 Bantul Vocational School. The training participants are expected to: improve competence in managing online learning systems / platforms; gain insight into the types / platforms of online learning; develop online learning materials that are in line with online learning objectives. The criteria for the success of the training activities are 70% of the total training participants who have successfully managed one complete online course / learning subject which includes content and learning activities. In addition, an evaluation of the implementation of PPM activities was obtained by distributing questionnaires to participants to measure the aspects of the benefits of the training material and the skills of resource persons in delivering the material*

Kata Kunci: *online learning, training, LMS platform*
