ABSTRACT

ABSTRACT

The community service (PPM) entitled "Workshop on Making Interactive Media based on Online Applications in English Learning for Early Childhood Education Teachers" aims to improve the ability to use TPACK for early childhood education teachers teaching English. In particular, this activity is designed to introduce and operate several online technologies and applications used when teaching during asynchronous processes, especially in the era of the Covid-19 pandemic so that teachers can still provide interactive learning experiences to children. This community service was held online with 20 early childhood education teachers from 10 kindergartens/early childhood education institutions in Yogyakarta as participants. The implementation was divided into 6 sessions with 3 different types of online applications by referring to the skills taught at school. The final evaluation was in the form of observations, questionnaire sheets, and the making of learning media as the final product of the implementation of this activity. Participants provided an assessment of the implementation of activities in the form of responses, impressions, criticisms, and suggestions. The evaluation included the material presented, the implementation of activities, the ability of the lecturer in delivering the material, and the use of learning media as well as the quality of the work of the participants
